

A WEATHER APP FOR THE PHILIPPINES

PH Weather Advisor

Hindi lang forecast, may payo pa.

It reads the forecast, checks your day, and tells you what to do in plain Taglish.

01 THE IDEA

Weather apps show numbers. People want answers.

Most people already check the weather on their phone. The app says 80% chance of rain at 5 PM, and you still have to work out what that means for your day.

PH Weather Advisor does that last step for you. It reads the forecast for your city, looks at the hours that matter to you, and tells you what to do: bring an umbrella, leave a little earlier, or hang the laundry while the sun is out.

AT A GLANCE

WHAT
A weather app that gives advice, not just numbers

FOR
Anyone in the Philippines who plans around rain and heat

LANGUAGE
Taglish, or English if you prefer

WORKS ON
Any phone browser, and it installs like an app

OFFLINE
Shows your last forecast even with weak signal

WHAT THE APP TELLS YOU

“Mainit sa umaga, pero uulan after 3pm. Magdala ka ng payong at umalis ka na before 4:30.”

It talks the way a friend would, in Taglish by default.

Who it's for

Commuters

“Mababasa ba ako pauwi?”

Checks the rain for the hours you leave and go home.

Students

“Kailangan ko ba ng payong papasok?”

Quick advice before school, in words that make sense.

Farmers

“Pwede na bang magbilad ng palay bukas?”

Shows the clear days ahead and when rain is coming.

Families at home

“Pwede ba magsampay today?”

Helps with laundry, errands and weekend plans.

02 WHAT IT DOES

Everything you need to plan your day, on one screen.

01 Forecast at a glance

Pick your city and see today and the next 7 days, with clear charts for heat and rain.

02 Advice in plain Taglish

The app explains the forecast in simple words. Tell it who you are (commuter, student or farmer) and the advice fits your day.

03 Alis-Uwi planner

Set the time you leave and the time you go home. It checks the rain for those hours only.

04 Heat check

A simple heat level (OK, Mag-ingat or Delikado) with tips like drinking more water and staying out of the noon sun.

05 Ask a question

Type something like “Pwede ba magsampay today?” and get an answer based on the real forecast.

06 Share to the GC

One tap sends a short summary to your family or barkada group chat on Messenger or Viber.

ALSO INSIDE

- Use my location
- Severe weather banner
- Works with weak signal

03 PANAHON NGAYON

Know the season you're in.

At the top of the app, one small card answers two questions people hear on the news but rarely get explained.

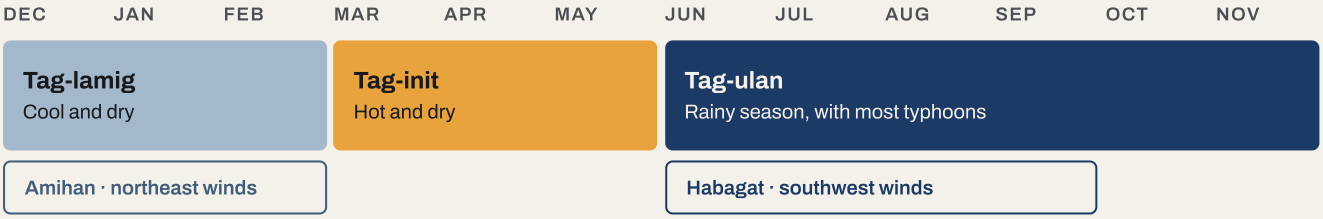

What season is it? Tag-init, tag-ulan or tag-lamig, and whether the Habagat or Amihan winds are blowing.

Are we in El Niño or La Niña? A simple label, plus one line on what it usually means for the Philippines.

The Philippine year, at a glance

Typical months. Amihan often starts in October or November.

El Niño

PACIFIC: WARMER THAN USUAL

Usually less rain and hotter days in the Philippines, with a higher chance of drought.

Neutral

PACIFIC: CLOSE TO NORMAL

The weather follows the usual pattern for the season.

La Niña

PACIFIC: COOLER THAN USUAL

Usually more rain than normal, with a higher chance of flooding in some areas.

> The app reads monthly ocean data from NOAA, the US weather and ocean agency, and turns it into a simple label. For the official El Niño or La Niña alert in the Philippines, check PAGASA.

04 HOW IT WORKS

Real weather data, explained in plain words.

1

Get the weather

The app gets the latest hourly forecast for your city from Open-Meteo, a free weather data service.

Cebu City · next 7 days · every hour

→

2

Work out the facts

Simple rules inside the app check what you care about, like rain on your way home or how hot it will feel.

Rain at 5 PM: likely
Heat: Mag-ingat

→

3

Explain it simply

AI turns those facts into short, friendly advice in Taglish or English.

"Magdala ka ng payong pauwi."

The AI explains. It never decides the numbers.

The app's own rules work out the facts first, and the AI only puts them into words. So the advice always matches the real forecast, and the AI can't make up a rain chance or a temperature.

Works like an app

Install it in seconds

Add it to your home screen straight from the browser. No app store needed.

Works with weak signal

Your last forecast and the season card stay on your phone, so they still show when you're offline.

Quick to open

A small, light app that loads fast, even on mobile data.

05 GOOD TO KNOW

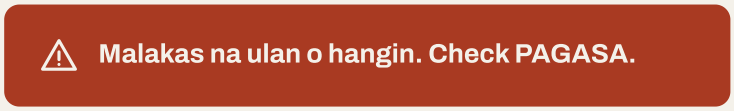

What it can do, and what it can't.

People should be able to trust the app, so it is honest about its limits.

Not an official forecast	The advice is written by AI from forecast data. For storm warnings and official alerts, always check PAGASA.
Heat level is an estimate	It's based on the “feels like” temperature, not PAGASA's official heat index.
El Niño and La Niña are patterns, not today's weather	They shape the whole season. They can't tell you if it will rain this afternoon.
No guessing on class or work suspensions	The app never predicts them. It points you to official announcements instead.
Season dates are typical	The real start of each season changes every year and from region to region.

In bad weather, it keeps it short

When strong rain or wind shows up in the forecast, a clear banner appears at the top. No jokes and no long advice.

06 COMING LATER

Rain alert before you leave
A phone notification before your Alis time if rain is coming.

Compare two cities
See which place has better weather, side by side.

Morning briefing
One short summary to start your day.

Hindi lang forecast, may payo pa.

Gumagana kahit mahina ang signal.
